Project Overview:

Project Name: Civil Engineering Insight Studio

Project Description: Problem Statement: Civil engineers often face the challenge of manually describing structures based on images, which can be time-consuming and subjective. Without automated tools, generating detailed descriptions of civil engineering structures, including types, materials, dimensions, construction methods, and notable features, requires significant human effort and expertise. To address this challenge, there is a need for an efficient and reliable tool that can automatically analyze images of civil engineering structures and generate insightful descriptions, enabling engineers to make informed decisions and communicate effectively about their projects.
